

Do you want the features of an EPOS system **at Cash Register prices?**

NX5400

Uniwell
Cash Registers

NX5400

Simple Business Control

The NX5400 has been designed as a high quality cash register that is feature rich yet very economical. It has been designed as a general purpose machine, the flat keyboard version is ideally suited for use in bars, café, quick service restaurants and bakery. The raised keyboard version is particularly suited to general retail stores and has the ability for bar code scanning.

With over 4000 PLU's as standard, 3 menu levels and 2 price levels you can be sure that you won't easily run out of capacity. In addition there are 3 modifier buttons that allow products to be sold in 4 different sizes.

The NX5400 comes with a numeric pop up customer display, heavy duty receipt plus journal printer (45mm wide) and an integral cash drawer.

Cash control

At the end of each shift the financial report clearly identifies the value of money that has been taken by each method of payment - this is used to reconcile against the actual cash in drawer.

Sales Analysis

The NX5400 allows you to monitor your sales mix, products can be linked to 10 main groups (Drink, Food etc) and 98 sub groups (Mineral Water, Coffee, Soda etc). In addition products can be linked to a further 25 groups which could be used to track product sales by supplier.

Operator Analysis

Individual operator performance (up to 23) can be monitored allowing you to keep an eye on the most productive staff and those making the most "mistakes". Up to 4 commission rates can be used providing managers with a way of giving incentives to operators.

Stock Control

Stock control comes as standard allowing you to enter an opening stock level. The stock report shows you what your current stock position is, this can be compared to a physical count thus highlighting any shortfall.

Simple Customer Accounts

Over 1800 customer accounts are available to store a transaction balance, the balance can be recalled at a later date and further items added.

Promotions

Two % adjustment buttons allow you to run in house promotions and even a simple customer loyalty scheme.

The adjustment feature allows you to give a customer a preset % discount of pre selected items.

Automate end of day routines

End of shift/day routines can be simplified by using one of the 4 arrangement buttons which allow you to setup a macro to automate key sequences.

Security

All reports, programming options and sensitive operations are available under key lock control.

Simple food ordering

In a pre payment food operation an order number or table number can be entered with a transaction, orders can be sent to kitchen printers with different products being printed on different kitchen printers.

System Features

The NX5400 comes network ready, it can be connected with up to 31 other terminals providing consolidated reporting across the entire system. In addition the NX5400 is also PC ready and can be connected to back office PC for simplified programming and reporting.
